MS. ANANYA KUMARI, 15 YRS / F UID: 12.22.0340

M.R. OF THE CRANIUM

Axial T1, FLAIR & FSE T2 weighted scans of the brain were studied and these were correlated with coronal and sagittal FSE T2 weighted scans.

Clinical: Follow up case of sellar and suprasellar germ cell tumor. Status post, post RT / CT. Scan was compared with previous MRI done on 30.12.2019.

No definite recurrent / residual lesion is seen in the sellar / suprasellar cistern.

Right frontal craniotomy changes are seen. Gliosis with peripheral hemosiderin deposit is seen in the right frontal lobe and proximal body of the corpus callosum - postop changes.

VP shunt is seen in situ with its tip in the right lateral ventricle. Bilateral lateral ventricles are thinned. Thin SDH is seen along the left fronto-temporo-parietal lobe having a maximum thickness of 4mm.

Cerebral and cerebellar parenchyma is otherwise unremarkable. No acute infarct is seen on diffusion weighted images. Bilateral basal ganglia and thalami are normal in signal intensity. No midline shift is seen. Brainstem is unremarkable. Skull base arteries demonstrate normal flow void.

Visualized portions of the orbits and paranasal sinuses are unremarkable.

IMPRESSION:

1. No definite recurrent / residual lesion in the sellar / suprasellar cistern.
2. Right frontal craniotomy changes with gliosis and peripheral hemosiderin deposit in the right frontal lobe and proximal body of the corpus callosum - postop changes.
3. VP shunt in situ with its tip in the right lateral ventricle. Bilateral lateral ventricles are thinned. Thin SDH along the left fronto-temporo-parietal lobe having a maximum thickness of 4mm.

Compared with previous MRI dated 30.12.2019, no significant change is seen. Contrast is not administered in the current scan.

Clinical correlation is necessary

Ankur
DR. ANKUR GADODIA
MD (AIIMS), DNB, FRCR (UK)

This is a professional opinion and not the diagnosis. Findings should be clinically correlated.

Facilities Available: 3.0 Tesla GE Pioneer MRI, 32 Slice CT Scan, Bone Densitometry (DEXA), Ultrasound with Color Doppler, Digital X-Ray, Echocardiography, ECG, PFT, EEG, NCV, EMG, Pathology Lab (NABL & NABH Accredited)

CE IMAGING (MRI)
SLICE CT)

CLINICAL POWER OF GE 3T SIGNA PIONEER

- 32 Channel head coil
- Dedicated MSK coils (shoulder, ankle, knee etc)
- Silent whole body scan
- Open sky-suite
- Multiparametric prostate imaging
- MAVRIC for metal artifact reduction
- MR neurography, MR enterography, MR renography
- MR cartilage mapping
- MR perfusion & tractography
- MAGIC (MAGnetic resonance image Compilation) multi-contrast technique - generate multiple image contrasts in a single scan
- Cube - volumetric imaging
