SARS-CoV2 (COVID-19) Real Time RT PCR Test

E gene : Not Detected
RdRP gene : Not Detected
N Gene : Not Detected
IC : Pass
SARS-CoV2 (COVID-19) RT PCR Test result : **NEGATIVE**

Interpretation:

Result	Remarks
Positive	RNA Specific to SARS CoV-2 Detected
Negative	RNA Specific to SARS CoV-2 Not Detected
Inconclusive	A Repeat Sample Is Suggested In Case Of Clinical Suspicion

Clinical Significance:

COVID 19 could be asymptomatic or present with symptoms of fever, cough, shortness of breath. Severe cases could lead to pneumonia, severe acute respiratory syndrome and sometimes death. One should seek medical advice if a symptomatic patient has been in close contact with a person known to have COVID-19 or live in or have recently traveled from an area with ongoing spread of COVID-19. COVID-19 is declared as a pandemic but need to be controlled by early diagnosis and following standard and droplet precautions to prevent transmission.

LOD: 10 copy

Limitations of the Assay:

One or more negative results does not rule out the possibility of COVID-19 virus infection. A number of factors could lead to a negative result in an infected individual, including poor quality of the specimen, low sample volume, timing of specimen collection (late or very early in the infection), inappropriate sample handling and shipping. Inherent technical reasons like virus mutation or PCR inhibition

Disclaimer:

1.This test is intended for use in conjunction with clinical presentation and other laboratory markers. 2.Improper specimen collection, handling, storage and transportation may results in false negative results. 3.The report represents only the specimen received in laboratory.
